

Christ or Everyman?

An antenna company in Germany has produced an image of Christ to disguise masts and antennae on churches. A source in Scotland commented: After I questioned the Archdeacon of about the Norfolk churches' decision to allow wi-fi (and hence pornography) in their churches, I was given a scolding (about who was I to make judgments about what the church can/cannot do). He was subsequently elected on to the government's Communications Committee.

Cites end of national sovereignty

Expert tells doctors of impending tragedy from EMF radiation as health of nations laid waste by technology

Communications technology is the system and method for the end of nations according to English physics expert Barrie Trower in an address before the Irish Doctor's Environmental Association (IDEA) at Dublin's Teachers' Club.

The IDEA is a voluntary non-governmental organization composed of medical and allied professionals. Each year the group hosts an annual lecture delivered by experts on a range of environment related issues. Speakers at the 2013 annual general meeting included Dr. Barrie Trower, Physicist, South Dartmoor College, U.K. who spoke on the "Health Effects of non-ionising (microwave) radiation" and Dr. Michael Antoniou, Kings College, London School of Medicine, who spoke on the "Sources and mechanisms of health risks from GM foods."

Due to his knowledge of physics and his background, he was vetted by police authorities before being asked to evaluate the proposed switch to a new communications system using the Motorola-developed pulsed signal of the same name. That request resulted in a secret report, now public and up-dated in 2008 which condemns Tetra.

Trower began his presentation by explaining that following WWII it became his responsibility to interview cold war spy suspects who had been irradiated as the military learned to fine-tune microwave frequencies to determine the emotional effects of the particular frequencies on suspected enemy spies.

“A part of my job when I left the military because I had microwave knowledge, and they were being used as weapons, was to question captured spies or agents which I did for eleven years and in my defense and, might I please say, that the program, run by Sir William Melville, I never used pain, humiliation embarrassment, drugs, hypnosis, nothing. I treated the ladies and gentlemen as I would talk to you. It was nothing more than a conversation over a cup of coffee.”

Melville is the real 'M', founding father of MI-5 and the inspiration for Ian Fleming's character in James Bond books and films.

With a bundle of documents tied with string on the table before him, Trower rattled off a list of top secret documents dating from the 1960's which detailed the pain and damage that microwave frequencies inflict on unwitting victims.

“The damage caused by microwave radiation is irrefutable,” says Trower, “There never is any doubt. There never was.”

After providing ample evidence that microwaves - everything from baby monitors, to cell phones, to communications masts, pulsed signals including Wi-MAX and Tetra are potential carcinogens including the ability to disrupt brain function - Trower turned to the reason why the public is largely uninformed about the dangers. ANother top secret document from the U.S. Defense Intelligence Agency holds the “the most dangerous lines” since the declaration of World War II. Trower quoted DIA Report No. DST-181 0S-074-76:

If the governments of the more advanced nations of the West are strict in enforcement of stringent exposure standards, there could be unfavourable effects on industrial output and military effects.

As a result of the know damaging weffect of microwave technnology and the oitential damage of industry and the military, the British government established the so-called Thermal Effect that when the effects of microwaves are felt as heat, then damage can occur.

“And that is still the only standard today,” said Trower, “six minutes of heating. In other words, providing you don't feel too warm, after six minutes of being near a transmitter or on the phone or whatever, it is deemed safe, that is it. That is the only safety level and today in the U.K. and the United States they'll have got away with that.”

According to Trower, the Thermal Effect standard was enough to satisfy the general public. In terms of linguistics,, once a condition has been given a name, the public will accept is and business goes on as normal. The same hold true for Sudden Adult Death Syndrome(SADS) in Ireland. Once a person dies the answer invariably comes back that they suffered a preexisting condition. No one in Ireland questions why it is the only country in the world where such a condition is recognised.

Thermal Effects are particularly damaging to childrens whose bodies are developing and have a higher percentage of water. Young girls are particular at risk from microwave radiation which affects ovarian follicles as they develop and the damage they suffered is passed down to subsequent generations.

“The bad news, as most of you will know,” said Trower, “is that the mitochondrial DNA is irreparable. So what we’re saying to your children is if we damage your mitochondrial DNA it is their children and their children and their children. As long as there is a female line you will have this genetic damage. So, by putting wi-fi in school classrooms, what you’re actually doing is sentencing 57 percent of your children to some form of birth defect forever. This is where the joke stops. It isn’t a decision we have the right to make.”

His warning is particularly relevant in Ireland where the Minister for Education, architect and town planner, Mr. Ruairi Quinn, has pushed through plans to put wi-fi in primary schools while in France, Germany, Austria, Russia and North America are removing wi-fi networks.

Trower confronts Minister Quinn and others like him to prove him wrong, “Now I have been right around the world lecturing and in every country in the last however many years,” he said, “When I appear on television or radio I make a challenge and I say what I want. I want this country’s top scientists, government scientists, industry scientists, I don’t care how many there are...I want them to humiliate me live, on air, and would they please come and do it. I have one question, just one question. What is the safe level of microwave irradiation for the ovarian follicles of an embryo? Drug companies can tell you if they have produced a drug for a child but to date in all of the years in every country not one person will meet me live on television and tell me, not one. And the reason is there isn’t one. I know there isn’t one because there can not be. There isn’t one. My reaction is, well, Why are we putting wi-fi in schools? Simple as that.”

The physicist moves from the effects of microwaves on humans and animals to the contentious issue of bees which he claims are being subjected to Colony Collapse Disorder (CCD) by microwave radiation. “We have birds are affected and it has appeared in *Nature* for the scientists here - it’s the cryptochrome mechanism in the brain. There have been further state government studies in cattle with birth defects – horses are particularly vulnerable to everything I’ve spoken of, whales, and there is a list here, cats, dogs, hamsters and they cite immune system birth problems, just about every animal there is on the planet is going to be affected which isn’t surprising because, if you think about it, at the cellular level when you get down to the DNA and the four bases, we are really all the same. And if you’re going to affect human cells you’re going to affect tree cells, buttercup cells, even germ cells,” he said.

In a challenge to the world’s military-industrial complex, Trower observed, “Microwaves are used in microbiological warfare, atmospheric warfare, environmental warfare. It seems that when you have half the world’s scientists engaged by the military, who have nothing else to do but to dream up ‘how can I harm someone else’ it’s not surprising that we have all of these things now.”

Trower told the group of an experience with the Oxford-Cambridge educated king of one of the 27 countries he has visited. “He said, when it gets worse the very countries that bring the cell towers in and cause the damage are the very countries - namely the Americans and the Indonesians - He said they are the very countries, the first in, to offer aid, a very generous package. He said, but there is a price for aid., He said they want mining rights, they want mineral rights, they want land rights and they want immigration rights. It’s a trickle but it’s a non-stop trickle. ‘So I have all of this going out and all of this coming in and,’ he said, ‘I’m going to lose the viability of my country. I might still be king but I will not be king of my country and my people and really that sums it up.’”

Another global effect is the effect of resultant pollution of the oceans. Trower finds himself at the epicentre of conflict between the Global Warming crowd and the Deniers. "Now you may or may not believe in global warming, I'm not going into that here," he said, "but one thing cannot be disputed. When you have carbon dioxide in the atmosphere, and it mixes with rainwater, you have carbonic acid. And the carbonic acid comes down into the oceans. And again, *Scientific American* or *Nature*, have published that the acidity of the oceans has reached critical levels for the photosynthesizers in the ocean and they produce about 50 percent of the world's oxygen. A lot of people don't realize that."

... for the punchline he adds, "We are really running the risk of losing our planet."
